

Assignment No. 7

Title :

Design and develop custom Application (Mini Project) using Salesforce Cloud.

Objective:

1. To learn about project development.
2. To learn how to build an application as a product.
3. To learn the basics of Salesforce Cloud development.
4. To create a custom application on Salesforce Lightning platform

Requirements:

1. Salesforce Cloud development tool.
2. OS - Windows / Ubuntu, Google Chrome

Theory:

1. Salesforce: Salesforce is a cloud computing service as a software (SaaS) company that specializes in customer relationship management (CRM). Salesforce's services allow businesses to use cloud technology to better connect with customers, partners, and potential customers. The software has become the number one for customer success and helps businesses track customer activity, market to customers, and many more services. Salesforce is a customer relationship management solution that brings companies and customers together. It is one integrated CRM platform that gives all your departments — including marketing, sales, commerce, and service — a single, shared view of every customer.

2. Salesforce Lightning Experience: Salesforce Lightning Experience is simply referred to as “Lightning”. When working with lightning, we will learn about different Salesforce lightning topics like Lightning Login, Lightning App Builder, Lightning for Outlook, Salesforce Lightning Components, Lightning Sync, and many more. Some are applicable in Lightning Experience only, but others will work in both Lightning Experience and older Classic user interfaces. Lightning Sync syncs your user contacts and events between your email server and Salesforce.

Application Development Steps:

Step-1: Log into the Salesforce Developer account.

Step 2: Switch to the Lightning mode by clicking on Lightning Experience. Open the Salesforce Lightning platform and click on Object Manager => Create => Custom Object.

Step 3: Fill in the required fields and under Optional Features, select **Allow Reports** and **Allow Activities**. Click **Save**.

Setup | Home | Object Manager

New Custom Object

Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Tell me more!](#) [Don't show this message again](#)

Custom Object Definition Edit [Save] [Save & New] [Cancel]

Custom Object Information ! - Required Information

The singular and plural labels are used in tabs, page layouts, and reports.

Label: Example: Account

Plural Label: Example: Accounts

Starts with vowel sound: ☐

The Object Name is used when referencing the object via the API.

Object Name: Example: Account

Description:

Enter Record Name Label and Format

The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.

Record Name: Example: Account Name

Date Type:

Optional Features

- ☒ Allow Reports
- ☒ Allow Activities
- ☐ Track Field History
- ☐ Allow in Chatter Groups

Object Classification

When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more](#)

- ☒ Allow Sharing
- ☒ Allow Bulk API Access
- ☒ Allow Streaming API Access

Deployment Status [What is this?](#)

Step 4: Now, Click on Fields & Relations => New.

Step 5: Then select option “Email” and click Next-> Next -> Save.

Step 6: Similarly, repeat steps 4 and 5 to add more fields like Phone, Date of Birth. This is how the custom object will have the various fields.

The screenshot shows the Salesforce Setup interface for the 'Student_Detail' custom object. The 'Fields & Relationships' section is active, displaying a table of 6 fields. The table has columns for Field Label, Field Name, Data Type, Controlling Field, and Indexed. The fields listed are Contact, Created By, EmailID, Last Modified By, Owner, and Student_Detail Name.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Contact	Contact__c	Phone		
Created By	CreatedById	Lookup(User)		
EmailID	EmailID__c	Email		
Last Modified By	LastModifiedById	Lookup(User)		
Owner	OwnerId	Lookup(User,Group)		✓
Student_Detail Name	Name	Text(80)		✓

Step 7: Now go to Home => search for “Tabs”. Click on New.

The screenshot shows the Salesforce Setup interface for the 'Tabs' section. The 'Custom Tabs' section is active, displaying a table of custom object tabs. The table has columns for Action, Label, Tab Style, and Description. The tabs listed are Comments, Names, Student_Names, StudentDetails, and xyz.

Action	Label	Tab Style	Description
Edit Del	Comments	Guitar	
Edit Del	Names	Pen	Enter your name
Edit Del	Student_Names	Star	
Edit Del	StudentDetails	Gears	
Edit Del	xyz	Cell phone	

Step 8: Enter the Object name and select any icon for tab style. Leave all defaults as it is. Click **Next**, **Next**, and **Save**.

Step 9: In Setup, click **Home**. Enter “App Manager” in Quick Find and select **App Manager**. Click **New Lightning App**.

Step 10: Define the new Lightning app as follows:
App Name: Student Details Manager
Developer Name: Student_Details_Manager. Click **Next**.

Step 11: On the App Options screen, leave the defaults as is and click **Next**. On the Utility Items screen, leave the defaults as is and click **Next**. On the Navigation Items screen, select **Student_Detail** and move them to the Selected Items box. Then click **Next**.

Step 12: On the Assign to User Profiles screen, select **System Administrator** and move it to Selected Profiles. Then click **Save & Finish**.

Step 13: Click on App launcher and Open the custom application created.

Step 14: Click on Student_Details => New => fill the specified details and copy the URL.

Step 15: Open Google Chrome new Tab => More Tools => Developer Tools and then paste the URL of the application, copied in the previous step.

A screenshot of a 'New Student_Detail' form within the Salesforce mobile app. The status bar at the top shows the time as 2:41 and battery level at 75%. The app header shows 'Salesforce' and the URL 'ap16.lightning.force.com'. The form has a title bar with 'Cancel', 'New Student_Detail', and 'Save' buttons. The form is titled 'Information' and contains several input fields: 'Student_Detail Name' (marked with an asterisk), 'EmailID', 'Contact', 'DateOfBirth', and 'Branch' (marked with an asterisk). Below these fields, the 'Owner' is listed as 'Palak Rath'. The bottom of the screen shows the same three mobile navigation icons as the previous screenshot.

Conclusion: We have learnt to create custom application using salesforce Lightning platform.
